

Wood & furniture

Major Polish furniture producer chooses ASTRON for reliability and quality! New plant built in only 8 months.

Poland is one of the biggest exporters of furniture in Europe.

While, today, there are many producers, Bydgoskie Fabryki Meble is one of the oldest. Founded in 1884, the company has grown steadily throughout its history. Its driving image has been one of quality and, to that end, it became the first furniture company in Poland to be awarded the prestigious ISO 9001 quality certification in 1996.

The company produces a complete range of both modern and classically styled furniture. It serves domestic markets, with an extensive range for living rooms, dining, bedrooms, home offices plus commercial outlets such as hotels and public buildings.

Growth demanded newer and bigger production facilities. So for its new factory, located in Bydgoszcz, the company turned to ASTRON. The new plant was constructed in only 8 months, the ASTRON building itself requiring just 4 months. The official opening and reception took place in May 2000.

Most important to the customer was punctual delivery and good quality; both conditions being met in full! No other special requests were expressed.

The largest part of the complex is an AZM-2/3 with a maximum span of 60m and an eave height of 9m. The roof is a PR120ASA, the walls are clad with PA/PI 100.

ASTRON cooperated with many component suppliers, as for example the Austrian provider of energy saving dust extraction system.

Technical details:

Construction year:	1999/2000
Type:	AZM-2/3/4
Dimensions:	± 174 m x 165 m
Total surface:	± 19,000 m ²
Eave height:	9.00 m
Roof slope:	6 %
Roof system:	PR 120
Wall system:	steel panels PA + PI

Advantages for the customer:

- Large free spans
- One supplier
